**DETAILED ACTION**

***Allowable Subject Matter***

1. Claims 23-31 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Regarding claim 23, the prior art of record teaches of a method of operating a communication station (MS) adapted to transmit a plurality of signals simultaneously at respective power levels.

The prior art of record fails to teach of **transmitting one or more first signals (DPCCH, DPDCH) simultaneously at a specified maximum combined transmit power level (Pmax); wherein , in response to a received signal, reducing the transmit power of the one or more first signals (DPCCH, DPDCH) and transmitting simultaneously with the one or more first signals (DPCCH, DPDCH) an additional one of a second signal (ACK or NACK) at a respective second specked power level (PA or PN) and a third signal (NACK or ACK) at a respective third specified power level (PN or PA), wherein the second specified power level (PA or PN) exceeds the third specified power level (PN or PA); wherein the reduction in transmit power of the one or more first signals (DPCCH, DPDCH) corresponds to the second specified power level (PA or PN) irrespective of whether the additional signal is the second signal (ACK or NACK) or the third signal (NACK or ACK), such that when the additional signal is the third signal (NACK or ACK) the combined transmit power level is less than the specified maximum combined transmit power level (Pmax).**

Regarding claim 27, a communication station (MS) adapted to transmit a plurality of signals simultaneously at respective power levels.

The prior art of record fails to teach of **transceiver means (38) for transmitting one or more first signals (DPCCH, DPDCH) simultaneously at a specified maximum combined transmit power level (Pmax), for receiving signals, and for, in response to a received signal, transmitting simultaneously with the one or more first signals (DPCCH, DPDCH) an additional one of a second signal (ACK or NACK) and a third signal (NACK or ACK); control means (30) for controlling the transmitted power level of the one or more first signals (DPCCH, DPDCH) and the additional signal (ACK, NACK); wherein the control means (34) is adapted to, in response to the received signal, reduce the transmit power of the one or more first signals (DPCCH, DPDCH) and to set the transmit power of the additional signal, if the additional signal is the second signal (ACK or NACK), to a respective second specified power level (PA or PN) and, if the additional signal is the third signal (NACK or ACK), to a respective third specified power level (PN or PA), wherein the second specified power level (PA or PN) exceeds the third specified power level (PN or PA); wherein the reduction in transmit power of the one or more first signals (DPCCH, DPDCH) corresponds to the second specified power level (PA or PA) irrespective of whether the additional signal is the second signal (ACK or NACK) or the third signal (NACK or ACK), such that when the additional signal is the third signal (NACK or ACK) the combined transmit**

Claims 24-26 and 28-31 depend on claims 23 and 27, respectively; therefore, they are allowed for the same reasons as set forth above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
